

City of Kelso, Washington
Water Storage Reservoir – Paxton Rd.
Project No. 590703

Project Description

The 2005 Water System Plan prepared by Kennedy/Jenks for the Longview-Kelso Urban Area identified the need for an additional 2.0 million gallons (MG) of storage in the City of Kelso's (City) main service zone (Zone 188). In May 2007 the City contracted with Kennedy/Jenks to perform a Water Storage Reservoir Siting Evaluation to identify a suitable site for a new 2.0 MG reservoir. The Paxton Road area was determined to be the most viable location for the new 2.0 MG reservoir. Based on recommendations contained in the Water Storage Reservoir Siting Evaluation dated September 2008, the City has purchased the property necessary to site the new 2.0 MG reservoir.

The site selected is on Paxton Road in Southeast Kelso. Preliminary Design is underway and final design should be complete mid 2010.
